SUMMARY

Mechanical Engineering graduate and Energy Systems Engineering double-major student with experience in aerospace manufacturing, energy systems maintenance, and CFD-based turbomachinery analysis. Skilled in Ansys Fluent, Fusion 360, AutoCAD, and thermal-fluid system design. Interested in defense and aerospace roles involving system integration, precision engineering, and multidisciplinary R&D.

EXPERIENCE

TÜBA Research Scholar & Laboratory Assistant

Feb 2026 - Present

- Working part-time as a student researcher at Yaşar University Laboratory under the TÜBA research scholarship.

Eren Enerji Internship

Aug 2025 - Sep 2025

- Assisted in routine mechanical maintenance of energy systems and equipment.
- Gained hands on experience in energy production processes, troubleshooting, and preventive maintenance.
- Developed technical, analytical, and problem-solving skills in an industrial environment.

Türk Havacılık ve Uzak Sanayii A.Ş. (TUSAŞ) / SKY DISCOVER 2025

Jul 2025 - Aug 2025

- Contributed to the system assembly of KAAN (MMU) aircraft systems, gaining hands on experience in aerospace manufacturing.
- Collaborated with engineering teams to understand system integration and quality control procedures.
- Developed technical and teamwork skills in a defense industry environment.

EDUCATION

Yaşar University

Sep 2021 - May 2026

Mechanical Engineering | BSc

Graduated | GPA: 3.32/4.00

Yaşar University

Sep 2024 - Present

Energy Systems Engineering (Double Major) | BSc

Current Year: 4th Year | GPA: 3.46/4.00

PROJECTS

Development of a Silent Energy Efficient Radial Flow Fan – Graduation Project

- Multi-objective aerodynamic and acoustic optimization of a radial flow fan conducted in collaboration with BOSCH, supported by TÜBİTAK 2209-B (University Students Industry-Oriented Research Projects Program), comparing impeller blade geometries and passive flow control methods, with CFD-based analysis of efficiency, pressure rise, and noise, validated against experimental measurements.

Spiral Ground Heat Exchanger Optimization

- Worked on a Yaşar University Scientific Research Project (SRP) conducted within the scope of a TÜBA research scholarship, focusing on the energy and exergy-based optimization of spiral ground heat exchangers by comparing different D/L ratios and material configurations.

Residential Building Heating & Cooling Load Calculation

- Calculated the heating and cooling loads of a residential building to analyze HVAC system requirements.

COURSES & CERTIFICATES

TEI (TUSAŞ Engine Industries) Aviation Engines School **Feb 2026 - May 2026**

- Participating in TEI’s technical training program on aircraft engines, gas turbines, engine performance, control systems, testing, manufacturing, and quality processes.

Gen Academy Program **Jan 2025 - May 2025**

- Training program on software technologies and artificial intelligence.

SKILLS & LANGUAGES

- **Technical Skills:** Ansys Fluent (Intermediate), Fusion 360 (Intermediate), AutoCAD (Intermediate), MATLAB (Intermediate), MS Office (Advanced), Python (Basic), EES (Basic)
- **Personal Skills:** Problem-Solving, Analytical Thinking, Teamwork, Responsibility, Time Management, Adaptability, Creativity
- **Languages:** Turkish — Native, English — B2+ (Upper-Intermediate)
